

Introduction

The Blue Grotto Online Slide Library is an interactive, user friendly, web based application that greatly enhances the distribution and maintenance of slide presentations for speakers and speaker bureaus. The Slide Library has been shown to save time and effort in the creation, distribution, maintenance and updating of slide kits while virtually guaranteeing better control, consistency, and compliance.

Blue Grotto Technologies, as a company solely dedicated to using advanced technologies for enhancing the medical education process, fully understands the challenges put forth in assuring the compliance with guidelines mandated by regulatory organizations such as the ACCME, OIG, FDA, and others. Our Slide Library technology includes all the features necessary to assure compliance by using technology to deliver mandatory, linked or grouped and disclaimer slides as required in every slide presentation.

What It Does

The aim of the BGT Slide Library is to:

- Maintain and house approved slides and slide decks in a centralized repository for easy access and reviewed by authorized professionals.
- Provide an easy online tool for speakers, presenters and educators to access slides and videos when creating presentations, and ensure these presentations adhere to corporate and government rules and regulations.
- Communicate with speakers and other stakeholders when new slide(s) are available, or existing slides require modification/correction.
- Track the use of slides by the speakers

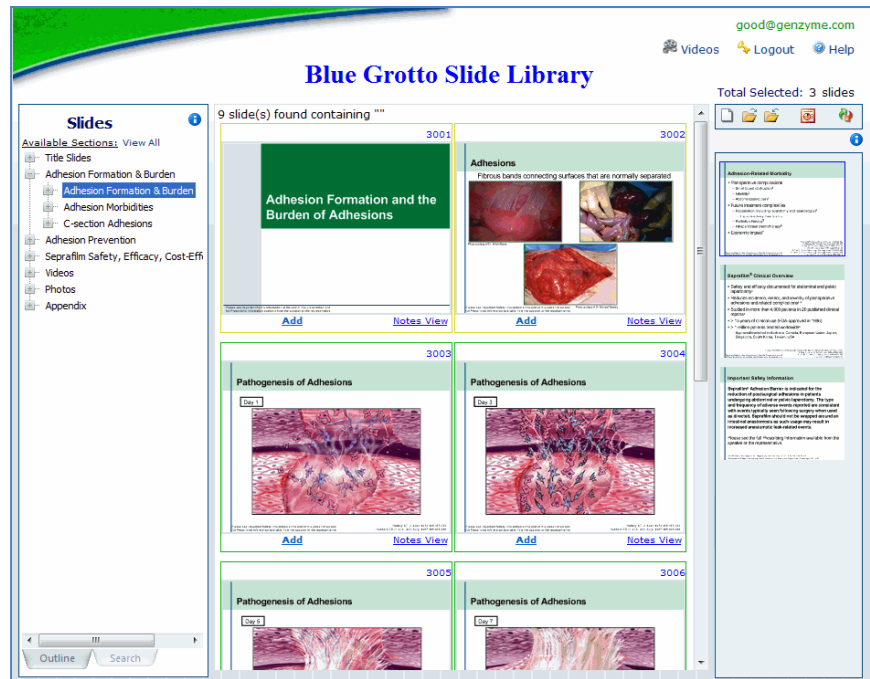

System Features

- Seamless integration of service into an existing site or stand-alone site requiring membership/registration
- Ensures "required" slides are automatically selected for every presentation (order can be designated)
- Ensures slides are linked as required and downloaded together (i.e. a "treatment" slide inseparable from "adverse event" slide)
- Provides for selection of recommended decks as a menu item, or creation of decks from the library
- All slides searchable by keyword or free text search from the slides and slide notes
- Provides an online expandable outline of the slide library contents for easy reference
- Presents slides in "image" format so that they cannot be edited or modified
- Slides may downloaded as pps or ppt format (pps can be locked)
- Integration of video clips to be downloaded with/as part of a presentation
- Speaker notes included with slides
- Extensive tracking of system usage
- Include any legal language as required

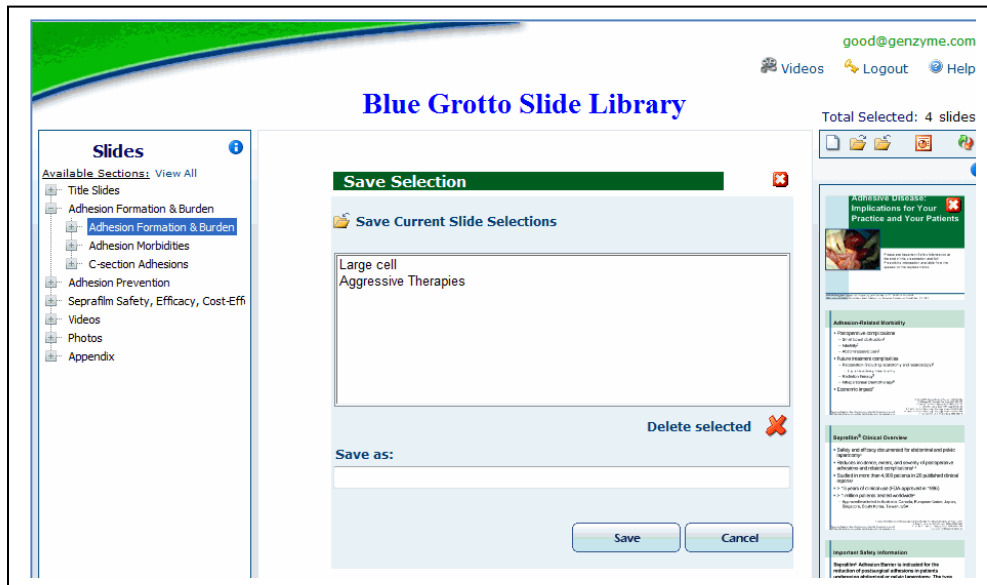

How It Works

Upon entering the system the user will be offered a search/review screen which enables the user to search for slides by presentation and/or keyword as provided by client, or through the use of an online expandable outline. Images of slides that meet the search criteria will appear onscreen in the viewing window. If the user wants to obtain the slide he or she clicks on the "Include Slide in Kit" button or drags the slide to the right hand column. The selected slides (new slide kit) can then be downloaded. Any required slides will be automatically pre-populated in the presentation (as designated by Client).

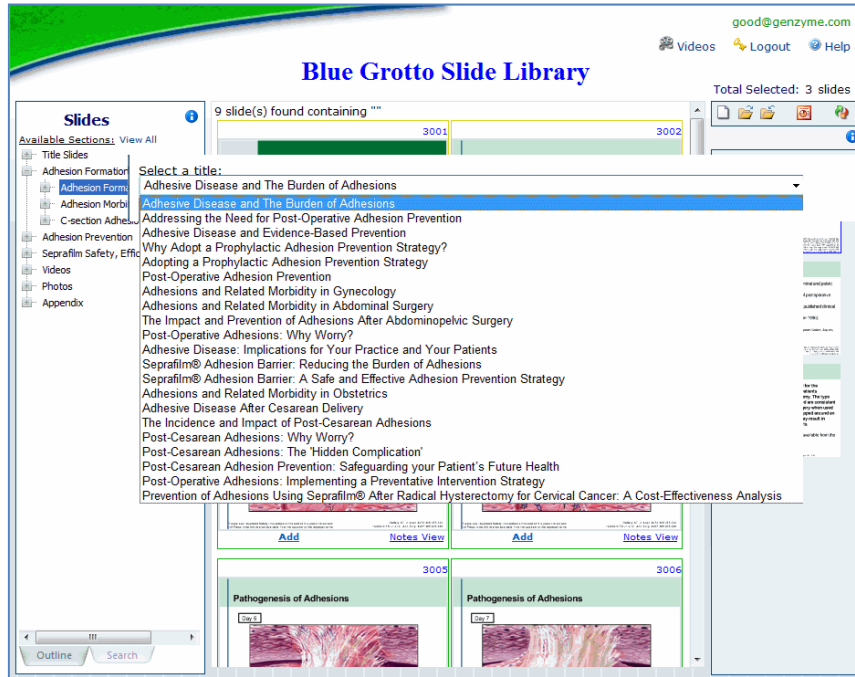

Slide Selection Screen

Slide set can be saved on the server for future reference. Any slides that are updated in the primary deck can be automatically updated in any decks including that slide on the server to aid in version control.

Title Slide Creation - Users can select a set title slide, with the titles provided by Client, for inclusion in the new kit. Users will customize the title slide with their own speaker information.

- **Slide to URL Link-** We can allow a “slide” to be linked to a URL so that when the slide is clicked on, a new browser with that URL will be displayed.
- **Video Integration-**These will be delivered as integrated videos which may be downloaded with the PPT file to be opened within the presentation (without linking to the internet for file retrieval).
- **Mandatory Slides-** When creating slide kits, the system can ensure that specified slides are included.
- **Linked Slides-**Specified slides can be linked to ensure that they are downloaded together, in a pre-defined order.
